Lab-5

1. How secure coding related to XSS?

Ans:

XSS is a vulnerability which allows attackers to inject malicious scripts in a website. There are various types of XSS.
EX: DOM XSS, stored XSS, reflected XSS
By taking important measure while creating a website we can avoid being a victim to XSS attack. One such example is input sanitization to avoid attackers from injecting malicious scripts.

2.Rxss on demo website.

An embedded page at xss-doc.appspot.com says

1

OK

<script>alert(1)</script>   Search

3.Stored xss on demo website
